

# MARKET COMMENTARY

3<sup>RD</sup> QUARTER 2020

## Economic Summary

Strong back-to-back quarters have propelled the S&P 500 into positive territory year-to-date (Chart 1), while the Dow Jones Industrial Average is essentially flat, and the small-cap Russell 2000 Index is down about 9%. Large-cap technology representation in the S&P 500 continues to be the main source of outperformance as the tech sector is up an astonishing 29% year-to-date.

The multi-trillion dollar monetary and fiscal stimulus spending implemented last spring blunted the full force of the Covid-19 related shutdowns. Further, the Federal Reserve continues its easy money policies with near zero short-term interest rates and quantitative easing (QE) that has been expanded to address almost all aspects of the economy. Additional fiscal stimulus is currently in limbo, as Republicans and Democrats continue to negotiate with the election less than a month away.

The U.S. economy appears to be rebounding sharply as unemployment is decreasing, personal savings are increasing, and industrial activity has been expanding (Charts 2-4). Although a second wave of Covid-19 may be looming, the U.S. is much better prepared to manage it now than earlier in the year. With a possible vaccine on the horizon, as well as an already improving economy with many people constrained to their homes for the past eight months, there could be a significant increase in pent-up economic activity in coming months.

**Economic Summary (continued)**

Politics continue to grab the headlines as the election approaches. Rarely have two parties been so diametrically opposed in nearly every aspect. According to most polls, it appears Biden is the frontrunner, but President Trump thrives as the underdog and will likely use it to rally his base. The importance of this election is paramount, as each candidate pledges vastly different ideals for the future of the country. President Trump will continue to promote free market capitalist principles of lower tax rates and reduced regulations, along with the appointment of conservatively-oriented judges. On the other hand, former VP Joe Biden seems likely to attempt to transform the U.S. into some form of European-style socialism. The trajectory for the future of America will be decided in the coming weeks.

**The Stock Market**

In what now seems like a quarterly tradition, growth once again outperformed value (Chart 5), and large-cap stocks bested small-caps. Large-cap technology stocks continue to drive the performance of the technology-heavy S&P 500. The difference between the Russell 1000 Growth and Russell 1000 Value now stands at nearly 36% year-to-date. Value investors have been foiled this year as energy and financial stocks continue to fall further out of favor and ever-popular, large-cap growth stocks garner investors' attention. Eventually the tide will turn, as it always does, but the timing is unknown.

# AVE MARIA SEPARATELY MANAGED ACCOUNTS MARKET COMMENTARY

## 3<sup>RD</sup> QUARTER 2020

### **The Bond Market**

The 10-year U.S. Treasury yield remained flat during the quarter at 0.7%. The Fed's commitment to low short-term rates and quantitative easing (QE) have the market pricing in low rates for years to come. Corporate credit spreads tightened modestly during the quarter, as earnings and future outlooks surprised on the upside.
